

THE
FACADE GROUP

Anthony J Golebiewski, AIA

agolebiewski@facadegroup.com

Anthony is an Enclosure Consultant with over 30 years of design, construction documentation and construction administration experience. He is a skilled Project Manager - assisting contractors, developers and other building professionals in all phases of the design process. He is able to translate complex designs into practical exterior wall systems without compromising aesthetic intent. He is a steady and knowledgeable addition to any team.

Anthony has worked on a number of large facilities, including Merck Research Laboratory (MRL) in Boston. This ambitious project won design awards both in Boston and Philadelphia. Anthony was responsible for the exterior envelope detailing on this project, including the custom glazed curtain wall. The company which was providing the original curtain wall closed mid-project and a new company was hired, causing delays and uncertainty. During this time, the construction manager's curtain wall team experienced three lead changes. Anthony was persistent for almost four years he spent on this project. His steadfast dedication and consistency is part of what makes Anthony an invaluable member of The Facade Group team.

Anthony has a Master's Degree in Architecture from The Catholic University of America and he is an active member of the AIA.
