

THE
FACADE GROUP

Jim Dossett

jdossett@facadegroup.com

Jim has 15 years of experience assessing and designing repairs for buildings and monuments. He performs broad-brush ground level surveys to highly detailed surveys aided by lifts, swing stages, or rope access. Detailed assessments often included non-destructive testing and probes to document the construction method used and identify hidden issues. Jim has worked exclusively on existing buildings, and is an expert on materials and enclosure systems found in older buildings. This includes materials not commonly used in new construction and therefore not familiar to most modern professionals.

Jim takes a comprehensive approach—understanding that building materials work together as a system and appropriate repairs must take into account the interactions between these materials. He carries out his approach by assessing the condition of all these materials and systems, identifying the causes of deterioration, designing appropriate repairs, and working with experts and artisans to see that the work is done correctly.

Noted Projects Include:

- ▶ Gant Science Complex, University of Connecticut, Storrs, CT
- ▶ Annenberg Hall, The Peddie School, Hightstown, NJ
- ▶ Rittenhouse Plaza, Philadelphia, PA
- ▶ William J. Nealon Federal Building, Scranton, PA
- ▶ Union League of Philadelphia, Philadelphia, PA
